

**ABSTRACT**

An objective is to provide a racket in which strings can be adjusted to have a desired tension in an easy manner. This racket includes: a loop-shaped frame body having an inner region in which strings are stretched in a net shape to provide a hitting area; a shaft section extending from one end of the frame body; a throat section for connecting the frame body with the shaft section; and a grip section gripped by a player that is provided at an end side of the shaft section, wherein the racket includes: a plurality of string holes provided in the frame body to allow the strings to be inserted therethrough; and a string tension adjustment member provided between the string holes provided to be adjacent to each other so as to provide a string folding section so that the string can be folded at a desired position.

(54) Title: SPORT RACKET

(54) 発明の名称: スポーツ用ラケット

(57) **Abstract:** A racket where the tension of a string can be easily adjusted arbitrarily, comprising an annular frame body providing a striking face by stretching the string in mesh in the inner region thereof, a shaft part extending from one end part of the frame body, a throat part connecting the frame body with the shaft part, and a part being gripped by a player provided at the end of the shaft part. The racket is further provided with a plurality of string holes made through the frame body in order to pass the string, and members for adjusting the tension of the string disposed between the string holes located closely and forming the turn back part of the string wherein the turn back position of the string can be altered arbitrarily.

(57) **要約:** スtringの張力を容易に且つ任意の張力に調節可能なラケットを提供することを目的とし、このラケットは、内方の領域にStringが網目状に張られて打面となる環状のフレーム本体と、該フレーム本体の一端部から延設されるシャフト部と、フ
